Archive, Antivirus, Anti-spam for Exchange and hMailServer

More Security For Your Server

Exchange Server Toolbox enhances the Microsoft Exchange Server or the free hMailServer with a spam filter, virus scanner, a multi-tenant capable email archive, and a versatile rule system. The plugin scans and processes reliably all emails that arrive via the SMTP service of the Exchange or the hMailServer.

Selected Main Features

Powerful Anti-Spam Solution

No unsolicited junk mails

- The integrated SpamAssassin runs out-of-the-box, including statistical Bayes filter and the option to train the identification of spam and ham emails manually.
- Company-specific spam detection can also be set up using custom spam rules.
- Integrated blacklists and whitelists for email addresses and words including auto-whitelist for all recipients of outgoing emails.

Reliable Virus Protection

In-depth controls for incoming and outgoing emails

- The antivirus software ClamAV is integrated and runs out-of-the-box.
- The extended ClamAV signatures continuously improve the protection against ransomware.
- An in-house, already existing antivirus solution can easily be integrated to improve security even more.

Automatic Emails Archiving

To relieve the server

- Multi-tenant capable email archive.
- Fully automated archiving of all incoming, outgoing and internal emails.
- Backups to databases, either Microsoft SQL or MySQL server, alternatively to the file system.
- Simple archive search for users via Outlook add-in.
- The integrity of all archived mails is ensured by creating a signature and checking against it, supported by an integrated database: Microsoft SQL Server or MySQL Server.

Comprehensive Rules Engine

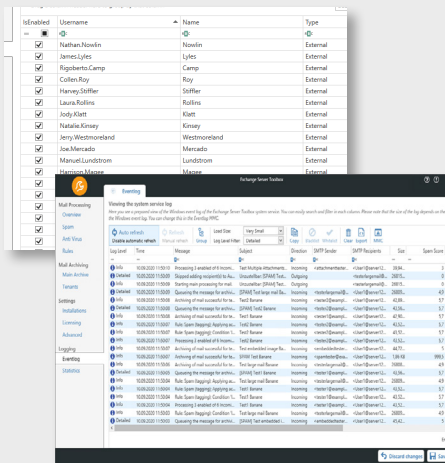

Simplified emails processing

- Emails processing with regular expressions, e.g. in personalized out-of-office-notices.
- Individual recipients can be blocked, thus stopping the sending of unwanted emails.
- Internal processes can be automated by adding predefined keywords to the email subject lines.

Additional Features

- ✓ Seamless integration into the server environment as a plug-in for the Microsoft Exchange Server as well as for the open source mail server hMailServer. Simple and clear configuration interface.
- ✓ Integrated simple archive search with access to the emails that have been released for the respective user.
- ✓ Efficient training of the spam filter with „spam“ and „no spam“ emails with the Outlook Add-in. The protection against junk emails is significantly improved.
- ✓ The „Distributed Installation“ allows to configure various server installation centrally.

Your Benefits:

- No junk mails with the reliable spam protection provided by the integrated spam filter SpamAssassin.
- Maximum security for the servers through the efficient antivirus protection of the preconfigured virus scanner ClamAV.
- Compliance with the regulatory requirements regarding the archiving of the entire email traffic.
- Automated processes and workflows through flexible and comprehensive rules engine.

Customer Voice:

„Outstanding job of creating Exchange Server Toolbox! We tested multiple email archiving software to achieve GDPR compliance and found that your software is not only the easiest to use but also very convenient to administrate. Also the pricing model sets you apart from competitors and makes your customers happy with the purchase. [...]“
