## IMAP and POP3 Connector for Exchange and SMTP Servers With Filter Functions

### Your IMAP/POP3 Emails Without Viruses and Spam

With SmartPOP2Exchange you download emails from POP3 and IMAP accounts and forward them reliably to an Exchange or any SMTP server. The smart connector also allows you to integrate your catchall accounts. The emails pass through an extensive control system including virus and spam scans and you decide, whether they are downloaded continuously or time-controlled.

### Selected Main Features

#### Retrieval and Delivery of Emails

- POP3 and IMAP connector/gateway for MS Exchange, Lotus Notes, and any other SMTP server.
- Adjust the download interval.
- Download emails from multiple accounts at the same time.

#### Protection against Spam and Viruses

- Mighty anti-spam solution: the integrated spam filter SpamAssassin facilitates creation of individual spamrules; Bayes-Filter and Spam-/Ham-Training included.
- Blacklists and Whitelists for email addresses and words are fully supported.
- The anti-virus software ClamAV is preconfigured - other virus scanners can be connected.

#### Automated Email Processing

- Powerful rule system: predefined actions can be performed for emails matching certain criteria.
- Flexible trouble shooting in mail delivery on specific issues with SMTP error rules.
- Backup for incoming emails.
- Error report via Email.

#### Compatibility & Integration

- Import and update account data from many different sources (e.g. MS Excel).
- Runs in the background as an independent Windows system service.
- Standard email files of external applications can be processed and sent via the PickupFolder.
- Autonomous installation: SmartPOP2Exchange is installed on a separate PC, not on your SMTP-/Exchange Server.

Additional Features

- ✓ Support for catchall accounts that contain the emails from many users. These emails are automatically distributed to the original addressee.
- ✓ Undeliverable Mails are stored on the hard disk and can be delivered again if required.
- ✓ Pickup Folder: A folder with email files (EML) can also serve as a source. The emails are retrieved from the folder and directly processed, similar to POP3 or IMAP accounts.
- ✓ The advanced results view tracks all results of the process. Additionally, filter and search functions enhance the clear display.

Your Benefits:

- 99% spam detection with renowned SpamAssassin and ClamAV - integrated anti-spam and anti-virus.
- Flexible, powerful and easy to apply - just like in Microsoft Outlook. Enjoy easy processing of emails!
- Automatic parallel processing of multiple email accounts.

Customer Voice:

„An easy to use configuration tool allows you to adjust common settings like download interval, timeout etc. and to add, delete or configure your SMTP/Exchange and POP3/IMAP accounts.“
